

Getting Started Guide

Model Number:

B001V1

KICKSTARTER EDITION

Thanks for backing us!

Please read this guide before
operating your ShotBot

Congratulations!

You are one of the first owners of the latest in cocktail dispensing technology. Bartendro™ Cocktail Bots and Dispensers pour a variety of liquids precisely, and you can control them from phones or tablets. Whether you set up ShotBot to remind you to drink your water, or use it for a quick round of no-mess shots, it will be sure to liven things up. What applications will you come up with? Share your projects at:

<http://partyrobotics.com/forums/forum/sharing/>

Important Precautions

- Do not use Bartendro or its components for medical or life-critical applications.
- **Avoid touching electronics when possible. The electronics in Bartendro may be damaged by static electricity, the sort your hands can pick up from shuffling your feet across the carpet. If you need to touch them, make sure to first discharge yourself by touching something metal connected to ground like a faucet or metal appliance.**
- Plugging and unplugging Dispensers while the system is powered may cause permanent damage to your Bartendro.
- Powering the miniRouter board without the Raspberry Pi and Dispenser plugged in may cause permanent damage.
- Plug networking devices into the Raspberry Pi only. Plugging them into any other RJ45 connectors on the miniRouter Board will cause damage.
- It is not recommended to keep clear tubing immersed in liquid for extended periods of time. Doing so may cause discoloration, or cause mold to form.
- You may need to periodically recalibrate the Dispensers as the tubing wears. See www.partyrobotics.com/docs/ for instructions on how to recalibrate them.
- If storing Bartendro for more than several weeks without use, we recommend removing the beige tubing from the Dispensers to extend tube life.
- Please drink and use responsibly.

You will need

Phillips screwdriver

Device with web browser (phone, tablet, laptop, etc.)

Wired Networking Router (for software updates)

Computer (for software updates)

Bartendro™ ShotBot Contents

What's Included

A	A001V1	Horizontal Foot (2)
B	A002V1	Vertical Leg (2)
C	A003V1	Faceplate
D	M041V1	Screw (8)
E	T002V1	Spout
F	T060V1	Food Grade Tubing
G	M054V1	Wire Clips (4)
H	M080V1	Alcohol Pad
I	N/A	Dispenser Compression Nut (2)
J	M101V1	Chopstick (tubing replacement tool)
K	E008V1	24V, 72W Power Supply with AC Power Cord

Assembly Instructions

Step 1

Build Frame Legs

Press vertical leg (B) onto the square fitting on the horizontal foot (A). Orientation of the holes should be in-line with the foot. Do this for both legs.

TIP: If the vertical leg is difficult to slide onto the fitting, try flipping it upside-down and resting it on a solid surface while using both hands to push down on the foot.

Step 2

Attach Faceplate

The protrusions from the faceplate (C) will fit into the large holes in the vertical legs.

Use the 8 screws (D) to attach the faceplate to the legs.

Note: If you would like to accommodate taller shot glasses, you can either cut the spout so that it is shorter, or remove the shelf where shot glasses rest and re-attach upside-down.

Step 3

Install Tubing and Spout

1) Feed the rigid spout and flexible tubing through the compression nuts. The end with the angled cut goes into bottles and the flat end towards the dispenser.

Make sure the tubing goes all the way through the nut and sticks out by about 1/8" on the side that says ">PP<" on it. If the opening in the compression nut is too small, you can use the chopstick to widen it.

2) Attach the 2 inch, rigid spout on the left side of ShotBot (E) and attach the flexible tubing on the right (F).

3) Tighten compression nuts so that there are only one or two threads showing.

4) Feed the flexible tubing through the opening in the metal (F).

Step 4

Insert SD Card

While looking at the back of ShotBot, hold the SD card with the pins facing you and carefully insert into the slot on the back side of the Raspberry Pi board.

It will hang out a little bit. This is okay.

Step 5

Attach Wire Clips (optional)

We've included some adhesive wire clips to keep the power supply cable neatly tucked next to the frame.

Use the alcohol pad to clean the surface before you apply the clips (G) so that they stick well. Remove the backing, and attach where desired. You may use as many or as few as you like.

Step 6

Power Up

Important: Before plugging the AC power cord into the wall outlet, insert the DC plug (see image at right) into the miniRouter board.

Then plug the AC power cord into an outlet for Bartendro to begin booting. When the time comes to turn off Bartendro, start by unplugging the AC power cord from the wall first.

Step 7

Insert Tubing into Bottle

While Bartendro is booting up, you can load your bottle for dispensing shots.

Insert the long flexible tube into an opened bottle so that it reaches the bottom.

You'll know Bartendro is ready when the Dispenser's lights begin to fade in and out, changing color. It normally takes about 1 minute after plugging power in for the system to be ready to use.

If the lights stay a solid color, or don't come on at all, see the Troubleshooting section on page 11.

Connect to Bartendro

Find Network and Connect

Using a WiFi-enabled device, find the “bartendro” WiFi network by looking for it in your settings, and connect to it. The first time you connect may take as long as 30 seconds to establish the connection.

Open Browser

iPhones and iPads will automatically display the Bartendro user interface (UI) soon after they connect to the Bartendro network. Users of Android and other devices will need to go to a web browser like Chrome, type in any web address, and they will automatically be redirected to the Bartendro UI.

For Windows 7 users, if Bartendro is turned on and your computer is connected to the Bartendro network, but the browser does not load the page, you may need to change the following setting:

- Click **Start** (bottom left corner).
- Type “**network connections**” and hit enter.
- Right-click on **Wireless Network Connection** and select properties.
- Select **Internet Protocol Version 4** and click the properties button.
- Make sure “obtain DNS server address automatically” is selected.

Pour a Shot!

The main menu will display the current ingredient being served and a button you can press to pour your shot. Go ahead, give it a shot!

The first time you dispense, be aware that the tubing is still full of air, so you will not get the full amount displayed.

To change the ingredient displayed or the default shot size you will need to go to **Admin > dispensers** by first logging into the admin menu, see next page.

Getting to the Admin Menu

To get to the Admin menu, find the hidden link at the bottom left corner of the main menu, or type “bartendro/admin” in the address bar of your browser.

When prompted use the default:

Name: bartendro

Password: boozemeup

Note: You can change the login name and password by going to **Admin > options**.

Admin

menu: This takes you to the main menu where shots can be poured.

dispensers: Select the ingredient you have loaded into Bartendro here. You can control the Dispenser manually by pressing the “turn on” or “dispense 10mL” buttons. Add more ingredients in **Admin > booze**.

drinks: Ignore this tab, it is only useful if there is more than one Dispenser present.

booze: Edit and create your ingredients in this section. What you save here will be displayed in the pull-down menu in **Admin > dispensers**.

options: Customize your settings by enabling or disabling many features here. Follow the instructions on-screen to make your selections. Some options may not be applicable to ShotBot. Your database file stores your settings and saved booze information. You can download this file and restore from it after a software update.

debug: Use this tab if Bartendro is mis-behaving. You can see the communications logs and test dispenser connectivity. You will likely need to reference this tab if requesting support.

Cleaning and Maintenance

For longest tube life, you should clean all of Bartendro's tubing after every use.

Step 1

Get three tall glasses or containers. Fill one with hot soapy water, one with clean water, and keep the third one empty.

Step 2

Go to **Admin > dispensers**, lift the flexible tubing out of the liquid or bottle that it's in and use the "turn on" button to drain the liquid from the tubing into your empty glass.

Step 3

Place the drained tube in your container of hot soapy water and while holding your empty glass under the spout, press the "clean" button. The button is located at the bottom of **Admin > dispensers**. This will run the dispenser long enough to wash out the tube.

Step 4

Repeat step 3 but with the glass of clean water. Sanitizing solutions like Star San (beer brewing sanitizer) may also be used. Do not use household chemicals.

Step 5

Finally, remove the tubes from the clean water and press the "clean" or "turn on" button once more to empty the clean water from the tubing and prepare it for its next use.

You should replace the inner beige Dispenser tubing after 500 hours of use (actual rotation time). If you plan on not using the bot for over one month, you should remove the beige tubing from the pump-head. Instructions on doing this can be found at www.partyrobotics.com/docs.

Troubleshooting

Dispenser is blue / green / blank after power up

This is normal. The lights will remain in this mode until proper communication with Bartendro establishes a proper connection with the Dispenser(s) (which takes about one minute). If after a minute the lights don't begin fading in and out, make sure the SD card is inserted properly.

Dispenser is flashing red

The Dispenser has been over-worked and has been shut off to prevent damage. Check tubes for blockage and press the "reset" button under **Admin > dispensers** when they look clear. This will restore the Dispenser to proper operation.

Air bubbles in tubes, or dripping

This is a sealing issue. You can try tightening the compression nuts first to see if they were just too loose. There should only be one or two threads visible. If that doesn't fix it, then the tubing might not be protruding all the way through the compression nut (see page 5 for reference).

Main Menu doesn't allow me to pour a shot

Check to make sure there is an ingredient selected and saved under **Admin > dispensers**. Also, make sure liquid level sensors are disabled in **Admin > options**.

Getting Under the Hood — Advanced Users

If you know how to SSH into a machine and want to modify the behavior of your bot, you can do that by plugging an ethernet cable from Bartendro's Raspberry Pi into a wired networking router (wireless is disabled for security). Once connected, the credentials are:

login as: bartendro
password: hackme!

Having Issues?

If you didn't find what you were looking for in this manual, try some of these options:

- Search the forums at www.partyrobotics.com/forums. We encourage you to post your questions so that others may learn from them.
- Check for up-to-date videos, manuals, and other guides at: www.partyrobotics.com/docs
- Email Us:
support@partyrobotics.com

Maker Warranty:

We're here for you! If you have made modifications to your hardware or software and are having technical issues, we will be glad to attempt to resolve them with you. If an item was damaged in shipping, or is otherwise defective or malfunctioning, please email us right away and we will do our best to make things right on a case-by-case basis.
